Operational Update

EQL Contestable Works

Prohibition on Operating Switches on HV Equipment
Connected to Network

Issue # C-0065 – 09/05/2025

Target Audience:

EQL Accredited Service Providers (**ASP**)

Direction:

Prohibition on operating switches on HV equipment connected to network.

Energy Queensland Limited (**EQL**) advises all ASPs that they are not permitted to operate any switches on HV equipment that is connected to the existing Energex or Ergon Energy network. This relates to any switching or testing activity for Contestable Works. Where testing is required on existing HV cables, the cable must be physically disconnected from the HV equipment under an Access Permit or the ASP must request the support of EQL staff to operate the switch on the HV equipment.

Implementation:

This direction is effective immediately.
